Brainstorming & Idea Prioritization

Date	30 September 2026
Team ID	6ab3e94b6603573ccfb3c558
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists possible ideas related to controlling record access in ServiceNow using script-controlled ACL logic. Ideas are listed first without judging them, following the template.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Team Member 1	Restrict record access based on a field value using an ACL script.	Access Control	1
2	Team Member 2	Allow access only when the logged-in user's role matches the record condition.	Authorization	2
3	Team Member 3	Use field-based conditions to allow or deny read access dynamically.	Dynamic Security	1
4	Team Member 4	Display an access-denied message when the ACL condition fails.	User Experience	3
5	Team Member 5	Test ACL behavior with users having different roles and field values.	Testing	2
6	Team Member 6	Create reusable script logic for field-based record restrictions.	Reusability	1

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the ideas that best support secure and maintainable field-based record access.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Script-controlled field-value ACL	High	High	1	Yes
2	Role + field based authorization	High	High	2	Yes
3	Access-denied handling and testing	High	Medium	3	Yes

Final selected concept: Implement a script-controlled ACL that dynamically restricts record access according to a specified field value, with role/condition validation and testing.
