Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template)

Create a problem statement from the perspective of the ServiceNow user or administrator. The statement focuses on the difficulty of controlling record access when authorization depends on a specific field value.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A ServiceNow user or administrator who needs controlled access to records.	Access only the records that are permitted based on a specific field value.	Standard role-based access alone may not provide the required record-level restriction.	The authorization requirement depends on values stored in individual records and must be evaluated dynamically.	Concerned about unauthorized access and the difficulty of maintaining secure access rules.

Project Problem Statement: Users need a secure and maintainable way to restrict access to ServiceNow records based on field values. The solution should evaluate the relevant field dynamically through an ACL script and grant or deny access accordingly.
