Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand the ServiceNow administrator/user from four perspectives—what they Say, Think, Do, and Feel—in relation to field-based record access restrictions.

SAYS • “I need access to only the records relevant to my role.” • “The access rule should be clear and consistent.” • “I should not see restricted records.”		THINKS • “Access should depend on the record's field value.” • “Unauthorized users must be blocked.” • “The rule should be easy to maintain.”
DOES • Creates and manages records. • Checks records based on business requirements. • Tests access with different users and field values.		FEELS • Concerned about unauthorized access. • Confident when access rules work correctly. • Frustrated when security rules are too broad or difficult to maintain.
