Scalability & Future Plan

Date	30 September 2026
Team ID	6ab3e94b6603573ccfb3c558
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	1 Mark

Scalability & Future Plan:

The future plan explains how the Script-Controlled ACL solution can support broader access-control requirements, more users, larger record volumes, and additional security conditions.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Current rule is designed for a specific field-based access requirement.	May need additional logic for new business rules.	Medium
2	Complex authorization may require multiple conditions.	ACL scripts can become harder to maintain as rules grow.	Medium
3	Testing is based on defined scenarios.	Additional user roles and edge cases may require wider test coverage.	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Supports defined project users and test scenarios.	Optimize ACL logic and test with larger user groups.
2	Data Storage	Uses existing ServiceNow record storage.	Continue using scalable platform storage and structured field usage.
3	Performance	Script evaluates field values during access checks.	Keep scripts efficient and avoid unnecessary database or processing operations.
4	Security	Field-based ACL restriction.	Extend with additional roles, conditions, and centralized security rules where required.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Support multiple field-based access conditions	Next Phase	More flexible authorization.
Phase 3	Extend testing for multiple roles and user groups	Future Phase	Improved coverage and security validation.
Phase 4	Reusable and configurable access-control rules	Long Term	Easier maintenance and expansion.
